Submitted (MAY-2005) to the EMBL/GenBank/DDBJ databases.
Submitted (MAY-2005) to the EMBL/GenBank/DDBJ databases.
-- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
-- SIMILARITY: Contains 1 PH domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           01-FEB-2005 (TrEMBLrel. 29, Created)

Brodbeck D., Hill M., Hemmings B.A.;
"Two splice variants of PKB gamma have different regulatory capacity depending on the presence or absence of the regulatory phosphorylation site Ser-472 in the C-terminal hydrophobic domain.";
J. Biol. Chem. 276:29550-29558(2001)
-!- FONCTION: 1GF-1 leads to the activation of AKT3, which may play a role in regulating cell survival. Capable of phosphorylating several known proteins. Truncated isoform 2/PKB gamma 1 without the second serine phosphorylation site could still be stimulated but to a lesser extent.
-!- CATALYTIC ACTIVITY: ATF + a protein = ADF + a phosphoprotein.
                  16-OCT-2001 (Rel. 40, Created)
16-OCT-2001 (Rel. 40, Last sequence update)
13-SEP-2005 (Rel. 48, Last annotation update)
RAC-gamma serine/threonine-protein kinase (EC 2.7.1.37) (RAC-PK-gamma) (Protein kinase Akt-3) (Protein kinase B, gamma) (PKB gamma) (STK-2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NUCLEOTIDE SEQUENCE (ISOFORMS 1 AND 2), AND MUTAGENESIS OF THR-305 AND

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        T->D: 2-fold increase of phosphorylation steady state level, no activation after
                                      Name=2; Synonyms=PKB gamma 1;
Isoid=09Y243-1; Sequence=V5P 004947;
Isoid=09Y243-2; Sequence=V5P 004947;
ISOUS SPECIFICITY: In adult tissues, it is highly expressed in brain, lung and kidney, but weakly in heart, testis and liver. It fetal tissues, it is highly expressed in heart, and not at all in kidney.
DOMAIN: Binding of the PH domain to the phosphatidylinositol 3-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HGNC; HGNC; 393; AKT3.

TISSUE SPECIFICITY: Isoform 1 Is expressed in prostate, testis, uterus and mammary gland and isoform 2 is expressed in prostate, testis and mammary gland.
DOMAIN: Binding of the PH domain to the phosphatidylinositol 3-kinase alpha (PI(3)K) results in its targeting to the plasma
SUBCELLULAR LOCATION: Cytoplasmic and membrane-associated after cell stimilateion leading to its translocation.
ALTERNATIVE PRODUCTS:
Event-Alternative splicing; Named isoforms=2;
                                                                                                                                                                                                                                                                               Phosphorylation on both sites is required for full activity. SIMILARITY: Belongs to the Ser/Thr protein kinase family. RAC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- CATALYTIC ACTIVITY: Belongs to the Ser/Thr protein kinase family.
-!- SIMILARITY: Contains | PH domain.

           Submitted (MAR-2004) to the EMBL/GenBank/DDBJ databases.

- I- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
- I- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
- I- SIMILARITY: Contains | PH domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Theeleh M., Swinkels S.U.M., de Jong M.D.M., Thomas A.A.M., Verkleij A.J., Hanafusa H., Humbel B.; Submitted (NOV-1997) to the EMBL/GenBank/DDBJ databases.
-!- GATALYTIC ACTIVITY: ATP + a protein = App + a phosphoprotein.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
-!- SIMILARITY: Contains 1 PH domain.

-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- SIBUNIT: Forms a stable but non-covalent complex with cyclin B in the complex belongs to the Ser/Thr protein kinase family.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
-!- SIMILARITY: Contains 1 PH domain.

-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
-!- SIMILARITY: Contains 1 PH domain.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

protein kinase (EC 2.7.1.37) akt3 [validated] - rat
NyAlternate names: protein kinase B gamma; RAC-PK-gamma; serine/threonine-specific protein
C;Species: Rattus norvegicus (Norway rat)
C;Species: Rattus norvegicus (Norway rat)
C;Accession: 31-Mar-2001 #sequence_revision 31-Mar-2001 #text_change 16-Aug-2004
C;Accession: JC4435
R;Konishi, H.; Kuroda, S.; Tanaka, M.; Matsuzaki, H.; Ono, Y.; Kameyama, K.; Haga, T.; Ki
Biochem. Biophys. Res. Commun. 216, 526-534, 1995
A;Title: Molecular cloning and characterization of a new member of the RAC protein kinase
C subspecies and beta gamma subunits of g proteins.
A;Reference number: JC4345; MUID:96063640; PMID:7488143
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonine A; Destribwy: aignal transduction pathways regulating various processes
C; Superfamily: RAC serine/threonine-protein kinase; plackstrin repeat homology; protein b; C; Keywords: ATP; phosphoprotein; phosphotransferase; serine/threonine-specific protein kinase. Lois/Domain: pleckstrin repeat homology «PLX»
F; 146-405/Domain: protein kinase homology «RIX»
F; 146-405/Domain: protein kinase homology «KIX»
F; 154-162/Region: protein kinase ATP-binding motif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Directin kinase (BC 2.7.1.37) aktl [validated] - rat

C;Comment: Aktl is ubiquitous as an inactive multimeric complex. It binds phosphatidyl-3
nt protein kinase 1 complex. Aktl can then autophosphorylate and become fully active.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonin

protein kinase (EC 2.7.1.37) akt2 [validated] - rat
NyAlternate names: protein kinase B beta; RAC-PK-beta; serine/threonine-specific protein
C;pecies: Rattus norregicus (Norway rat)
C;baccession: JC2438
Rikonishi, H.; Shinomura, T.; Kuroda, S.; Ono, Y.; Kikkawa, U.

A,Strart codon: ACG
A,Introns: 261/3; 327/3; 457/3; 535/3; 584/3
C,Function:
C,Function: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonin
A,Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonin
A,Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonin
C,Superfamily: RAC serine/threonin-protein phosphortein; phosphotransferase; serine/threonin
C,Keywords: ATP; autophosphorylation; phosphortein; phosphotransferase; serine/threonin
C,Keywords: ATP; autophosphorylation; phosphorylation motif
F,242-280/Region: protein kinase ATP-binding motif
F,255/Active site: Lys #status predicted
F,423/Binding site: phosphate (Thr) (covalent) #status predicted
F,586/Binding site: phosphate (Ser) (covalent) (by autophosphorylation) #status predicte
